## **DETAILED ACTION**

### ***Response to Preliminary Amendment***

1. This office action is in response to Preliminary Amendment filed on April 20, 2004.
2. Claims **13 – 54** have been cancelled.
3. Claims **1 – 12** are presented for examination.

### ***Information Disclosure Statement***

4. This office acknowledges of the following items from the Applicant:

Information Disclosure Statement (IDS) filed on April 20, 2004.

The references cited on the PTO -1449 form have been considered except foreign patent documents' abstracts (the examiner could not locate them in patent application file (IFW)).

### ***Claim Rejections - 35 USC § 112***

5. Claims 1 –12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
6. Claims 1 – 12 provide for the use of a method of detecting a mismatch in a CAM device , but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 1-12 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper

definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Since claims 1-12, applicant discloses a method of detecting a mismatch in a CAM circuit. However, applicant does not reveal any step to involved the method, which applicant regards as a method invention claims.

Therefore, the claims should be amended for more clearly as discussed above.

### **Claim Rejections**

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims **1 – 12** are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims **1, 2, 3, 4, 10, 12, 14** and **16** of **co-pending application s/n 10/320,493**. Although the conflicting claims are not identical, they are not patentably distinct from each other because **it would have been obvious to one of ordinary skill in the art at the time of the invention was made to** *“clamping the lead frame between a lower mold and an upper mold so as to form a first resin flow passage, a second resin flow passage, a first air vent passage and a cavity, the semiconductor chip and the wires being arranged in the cavity, the first resin flow passage being connected with the cavity through the second resin flow passage, and the first air vent passage being connected with the cavity”* perform the step of adding a nonmetal element or ions of the nonmetal element into the crystalline semiconductor thin film by introducing “ *clamping the lead frame between a lower mold and upper mold so as to form a first resin flow passage, a second resin flow passage, (forming an air vent connection with the cavity as cited in claim 24) and a cavity, the semiconductor chip and the wires being arranged in the cavity, the first resin flow passage being connected with the cavity through the second resin flow passage* “ the step of adding argon or argon ions to a region of the crystalline semiconductor thin film in order to define inventive “a method of manufacturing a semiconductor device”.

When responding to the office action, Applicants' are advice to provide the examiner with the line numbers and page numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.
